

CHRIS KLINK
dogmar@github
chris@klink.ing

Senior frontend engineer with a design background, specializing in design systems and component architecture. At Cleanlab, served as the sole frontend technical lead — owning architecture decisions, setting contribution standards, and partnering with PM and design on product direction across a 3-product B2B SaaS platform.

EXPERIENCE

Senior Frontend Engineer

2024 – Jan. 2026

Cleanlab – San Francisco, CA

Architected a composable component library (React, TypeScript, Tailwind CSS) that became the shared foundation across 3 products — enabling new product UIs to go from zero to working prototype in 1–2 weeks.

Established contribution infrastructure for the component library: authored documentation and JSDoc standards, built CI/CD pipelines with automated semver versioning, and maintained a beta release channel — setting the standards all frontend contributions were held to.

Rebuilt the marketing site from ad-hoc styles into a reusable component system — eliminating dependency on an external contractor, enabling non-engineers to ship content updates independently, cutting build times from 15 to 5 minutes, and bringing the site to full WAI-ARIA conformance.

Replaced ag-grid with a custom TanStack Table implementation — unlocking expandable row detail views showing complete Q&A conversation threads with AI-powered response quality analysis, features architecturally incompatible with ag-grid's model, while eliminating third-party styling constraints and reducing bundle size.

Built a concurrent chat interface supporting multiple simultaneous streaming conversations with real-time hallucination detection, switchable mid-stream without blocking — became the sole demo tool for a net-new product line, driving every sales conversation from launch.

Frontend Engineer

2022 – 2024

Plural – Remote

Built a real-time infrastructure monitoring dashboard for enterprise platform teams — surfacing live metrics across distributed environments via GraphQL subscriptions, with complex state management to handle high-frequency data updates.

Became sole owner of an inherited frontend component library, driving UI consistency and adoption across a full-stack team with varying frontend experience.

Senior Designer/Developer

2015 – 2022

Camp + King – San Francisco, CA

Built and maintained web products using React and Next.js for a range of clients across industries.

Senior Interactive Designer

2008 – 2015

FCB (Now Omnicom) – Seattle, WA + San Francisco, CA

Designed and developed interactive promotional websites using HTML, CSS, and JavaScript, delivering cross-browser and cross-device compatibility that met brand guidelines and technical requirements.

Created print and digital advertisements. Developed creative concepts and implemented them across various platforms to maximize campaign reach and engagement.

SKILLS

Languages: HTML, CSS, JavaScript, TypeScript

Technologies: React, Next.js, Tailwind CSS, TanStack Table, CSS Modules, Styled Components, GraphQL, Vite, Vitest, Sass, GSAP, Motion

Accessibility: WAI-ARIA, semantic HTML, screen reader compatibility

Design Tools: Figma, Rive, Photoshop, Illustrator, After Effects

EDUCATION

Bachelor of Science in Computer Science

2003

Western Washington University – Bellingham, WA

Associate of Applied Science in Graphic Design

2008

Seattle Central Creative Academy –
